JUSTIN LANNING

Game Developer
Houston, TX 77090
(832) 477-5274 | Justin.Lanning40@gmail.com

PROFESSIONAL SUMMARY

Game Developer with a strong foundation in Unreal Engine 5 and multiplayer systems development. Proficient in C++ and Blueprint scripting, with hands-on experience building networked gameplay features, implementing replication, and debugging real-time interactions. Skilled in developing core gameplay mechanics and collaborating on team-based projects to create engaging, scalable, and immersive multiplayer experiences.

TECHNICAL SKILLS

Programming Languages: C#, C++, Python
Game Engines: Unity, Unreal Engine 5
Tools & Platforms: Visual Studio, Git/GitHub, Version Control, Jira, Agile methodologies, Remote collaboration tools
QA & Testing: Manual testing, Debugging, Bug tracking, Documentation, White Box Testing, Black Box Testing, Gray Box Testing
Soft Skills: Team leadership, Technical communication, Training & mentorship, Problem-solving

---

Projects

Potion Panic – Networking Engineer

- Integrated Steamworks SDK for matchmaking, lobby management, and peer-to-peer networking, enabling seamless session creation
- Designed and implemented low-latency multiplayer networking systems in Unreal Engine 5 using replication, RPCs, and client-server architecture

Highway Heat – Gameplay Engineer

- Built gameplay systems on top of an ECS architecture using EnTT, structuring AI components and systems for scalability and improving update performance across large numbers of entities.

- Integrated Gateware for cross-platform windowing, input handling, and system abstraction, streamlining engine-level interactions and reducing platform-specific code complexity.

Operation Starfall – Systems Engineer

- Designed and implemented a modular inventory system supporting item stacking, equipment management, and UI integration, reducing item management errors and improving player interaction efficiency.
- Built a robust save/load system using serialization (JSON/Binary) and persistent data handling, ensuring reliable game state recovery across sessions and reducing data loss issues.

PROFESSIONAL EXPERIENCE

Contracted Remote QA – QA Tester

Elder Scrolls Online – March 2013 – April 2014

- Analyzed system behavior and logic paths to identify edge cases, including invalid inputs, state inconsistencies, and unexpected player interactions.
- Reproduced and isolated defects by investigating in-game behavior against expected logic, providing detailed reports with clear reproduction steps and impact assessment.

Marvel Rivals – October 2024 – December 2024

- **Validated gameplay systems across multiple scenarios and boundary conditions to ensure stability, consistency, and adherence to design specifications.**
- **Maintained detailed test documentation, including test cases, test results, and defect tracking, improving visibility into quality and coverage.**

Serta Simmons Bedding – *Maintenance Technician*
Houston, TX | February 2023 – February 2024

- Diagnosed and repaired complex machinery, electrical, pneumatic, and hydraulic systems—using systematic troubleshooting similar to debugging in QA environments.
- Performed preventive maintenance and prioritize tasks to optimize production uptime.
- Trained operators in technical skills, improving troubleshooting and equipment efficiency.

U.S. Army – *Helicopter Maintenance Supervisor / Repairer*
Various Locations | July 2016 – December 2019

- Supervised teams performing diagnostics and maintenance on helicopter systems, ensuring 100% operational readiness.
- Conducted structured tests on electrical, hydraulic, and fuel systems—transferable to software QA methodologies.
- Created documentation and training materials to standardize processes across teams.

EDUCATION

Full Sail University – *B.S. in Video Game Development, GPA: 3.50*
June 2026 – Winter Park, FL

Universal Technical Institute (UTI) – *A.O.S. in Automotive Technology, GPA: 3.70*
July 2022 – Houston, TX
